Auto Insurance Dashboard Executive Overview

Four dashboards. One view of performance, customers, and claims.

Executive Overview

- Setting the Scene: The portfolio actively manages 851K in total premiums across 27K active policies and 9K unique customers, maintaining an average monthly premium of 93.22.
- Core Drivers: Business volume is heavily driven by Personal Auto policies (633K in premiums), with distribution anchored by Agents (326K) and Branch offices (240K).
- Key Challenge & Timing: Policy expirations skyrocket in January and February (~8.2K–10.0K policies expiring). This indicates that retention efforts must be heavily front-loaded in Q1 to protect top-line revenue.

Campaign Performance & Customer Response

- The Opportunity: With an overall campaign response rate standing at 14.32% (1K responders vs. 8K non-responders), targeted offer refinement presents significant growth potential.
- Winning Offers & Channels: Offer 2 is the clear high-performer with a 23.38% response rate, outperforming Offer 1 (15.83%). Deliveries routed via Agents achieve the highest engagement (19.88%).
- Customer Profile: Divorced customers demonstrate the highest response propensity (18.75%), whereas response rates remain relatively stable across all education levels (~13%–17%).

Financial Performance & Claims Analysis

- The Core Risk: Despite strong top-line premium generation, the portfolio faces a critical profitability issue with total claims reaching 3.96M against 851K in premiums, driving a Claim-to-Premium Ratio of 4.66%.
- Demographic Loss Analysis: The vast majority of claim volume stems from Employed customers (2.04M in claims), followed by Unemployed policyholders (1.39M).
- Price Line Balance: Average monthly premiums remain consistently aligned across income segments (ranging between 91.4 for high income and 95.4 for medium income), indicating pricing structures do not currently adjust for risk exposure across income tiers.

Customer & Vehicle Intelligence

- Vehicle Fleet Mix: Four-Door Cars represent the core of the portfolio with 13.8K policies ($357,775 in total premiums), followed by Two-Door Cars (5.6K) and SUVs (5.2K).
- Customer Base Breakdown: The customer base is dominated by Married individuals (~16K policies), with Medsize vehicles standing out as the most common vehicle size across all segments.
- Education Concentration: Premiums are evenly distributed among Bachelor, College, and High School or Below qualification levels (holding roughly 0.25M each).

One connected view of auto insurance performance

- Capitalize on Early-Year Renewals: Deploy high-converting offers (Offer 2) through direct Agent channels in December/January to capture expiring contracts.
- Re-evaluate Underwriting & Risk Pricing: Restructure risk assessment for Employed and Unemployed segments to control the high claim total of 3.96M.
- Double Down on High-Value Assets: Tailor cross-selling and bundled offers specifically for Four-Door and Medsize vehicle owners who represent the highest policy volume.

Thank You
